

DCM-PRO Perimeter Strip

DCM-E-25

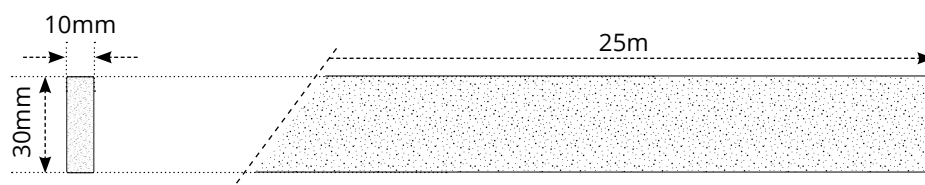

Overview

The DCM-PRO self-adhesive perimeter strip is used if you plan to self-level over the Warmup DCM-PRO system. It can also be used with other Warmup systems if self-levelling is required (see table below). The polyethylene perimeter strip is installed around the perimeter of the room, along walls and doorways prior to the self-levelling being poured over the installed system.

The perimeter strip insulates whilst also allowing for differential movement between the finished floor level and walls. This is important because buildings are subject to movement caused by a variety of factors, such as settling, temperature changes, and moisture fluctuations.

Dimensions

Compatible with

Electric Systems

Warmup DCM-PRO

Warmup StickyMat

Warmup Loose Wire

Warmup Hydronic Systems

VLo Ultra-12

VLo Nexxa-12
